## 01 Nightmare Survivors

Co-op survival / roguelite

|              |                                                                                                                              |
|--------------|------------------------------------------------------------------------------------------------------------------------------|
| ROLE         | Gameplay and Systems Developer                                                                                               |
| CONTEXT      | A party of up to four players enters a separate nightmare world and tries to survive escalating nights while rescuing Tommy. |
| CONTRIBUTION | Gameplay and production systems for the cooperative survival loop.                                                           |
| KEY SYSTEMS  | Party and teleport flow; base building and upgrades; anomalies; exploration and combat.                                      |
| RESULT       | Released Roblox experience with a complete repeatable night-survival loop.                                                   |

## 02 Strength Clicker

Simulator / progression

|              |                                                                                          |
|--------------|------------------------------------------------------------------------------------------|
| ROLE         | Systems Developer                                                                        |
| CONTEXT      | Players train strength, evolve fireballs, collect pets and compete for King of the Hill. |
| CONTRIBUTION | Development of interconnected progression and gameplay systems.                          |
| KEY SYSTEMS  | Training; fireball evolution; pets; PvP; persistent progress; social bonuses.            |
| RESULT       | Released simulator with several parallel progression paths.                              |

## 03 Build a Scam Empire!

Live tycoon / 49M visits

|              |                                                                                                       |
|--------------|-------------------------------------------------------------------------------------------------------|
| ROLE         | Live Ops and Updates Developer                                                                        |
| CONTEXT      | A plot-based tycoon where workers produce cards that players collect and sell to expand their empire. |
| CONTRIBUTION | Supported the released project and developed production updates for its live audience.                |
| KEY SYSTEMS  | Worker shop; plot placement; collect-and-sell economy; offline earnings.                              |
| RESULT       | Live project with 49M visits at the time the portfolio was submitted.                                 |
